

AUTOMATED EXTERNAL DEFIBRILLATORS (AED)

Cardiac arrest can happen to anyone, anytime, anywhere and at any age.

More than 350,000 cardiac arrests happen outside of the hospital setting annually, and less than 10% of patients survive. However, the chances of survival more than double with the immediate use of automated external defibrillator (AED) combined with CPR. AEDs are simple to use, affordable and extremely effective.

With the press of a button, the AED will instruct you to either continue CPR or prepare to shock the patient back into a normal rhythm. Having an AED in your home or office will save lives.

AED SPECIFICATIONS

LIFEPAK CR Plus

The LIFEPAK CR Plus defibrillator is perfect for those who are minimally trained in a home or office. Its safe and simple design is for use by any person at the scene of a sudden cardiac arrest.

- Consistent with AHA/ERC 2015 guidelines
- Semi and fully-automatic configuration allows user to focus on patient
- Clear, calm voice commands guide the user step by step
- Infant/child electrode capability
- Lightweight

LIFEPAK 1000

The LIFEPAK 1000 is designed to be the most durable basic life support (BLS) tool available. This model has the most configurations available to accommodate your patient and CPR protocol requirements and is the perfect choice for EMS providers.

- Highly configurable to adapt to your resuscitation protocol
- Upgradable platform to meet your needs and remain compliant with AHA regulations
- Rugged design
- ECG readout
- Override feature allows advanced care providers full operational control
