

REMOTE & INDUSTRIAL PARAMEDICS

An **Acadian** company

MEDICAL DIRECTOR

The high standard of care provided by SMS' remote paramedic service is in large part due to the involvement of our SMS Medical Director, Dr. Donald Thibodaux. Dr. Thibodaux's background in both emergency and occupational medicine affords SMS the advantage of understanding OSHA incident classifications and their effects on the energy industry.

Dr. Thibodaux is an invaluable resource to field medical personnel and remains on 24-hour call for physician consultations. He takes part in instruction for clinical extension courses and regular training sessions with the team to ensure the highest quality emergency medical response in the Gulf of Mexico. Dr. Thibodaux continues to be on the forefront of remote medicine with his study on medical evacuations from oil rigs off the Gulf Coast of the United States.

TELEMEDICINE

Under the guidance of Dr. Thibodaux, SMS remote paramedics provide the highest level of occupational medicine in the industry. Telemedicine allows for remote paramedics to treat patients and send emergency medical information over a secured network from the most isolated locations or offshore.

Our telemedicine services:

- Enhance patient care
- Minimize LTIs, medical transports and OSHA recordables
- Provide real-time consulting, remote medical exams and remote medical procedures
- Extend our medical reach across the globe
- Include individual health assessments and proactive health & wellness plans from registered and practitioner nurses

Exercise regimens, sleep and stress management, tobacco cessation and supervision of chronic conditions can all be managed remotely.

By bringing critical components of healthcare together, SMS is investing in advancing healthcare, reducing unnecessary transports and evacuations and retaining and recruiting skilled labor by keeping workers well.
